The diagram illustrates three methods for attaching a cabinet to a wall:

- Method 1 (Top):** The cabinet is attached to a wooden beam (4) using screws (5) and a bracket (6). The beam is secured to the wall with screws (5) and a bracket (6). A cloud with a question mark indicates a choice between methods 1 and 2.
- Method 2 (Middle):** The cabinet is attached to a concrete wall using a bracket (6) and a screw (5). The bracket is secured to the wall with screws (5) and a bracket (6).
- Method 3 (Bottom):** The cabinet is attached to a wooden beam (10) using a bracket (6) and a screw (5). The beam is secured to the wall with screws (5) and a bracket (6).

A diagram showing the door of the refrigerator being closed. A dashed line indicates the door's position as it moves back into its closed position, with an arrow pointing towards the door to indicate the direction of movement.
